

Bond Project News

Summer/Fall 2009 Update

Thank You Voters!

Our appreciation goes out to the Oregon Trail Community for approving a bond measure to build a new high school and upgrade our other schools.

**BOND
OVERSIGHT
COMMITTEE**

Community Members:

- > Harry DeWolf
- > Bill Gallagher
- > Jerry Knowlton
- > Kimberley Nelson
- > Mike Walker

School Board Member:

- > Kurt McKnight

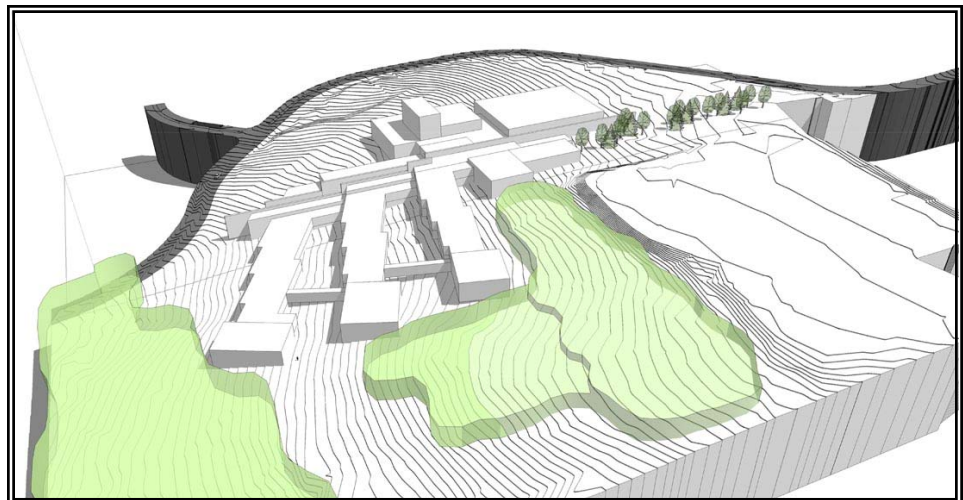

District Support:

- > Tim Belanger, Business Director
- > Debbie Pearson, Project Manager
- > Jim Seipel, Facility Operations Director
- > Julia Monteith, Communications Director

Our New High School is Becoming a Reality

Shelley Redinger, Superintendent

This past spring and summer has been exciting - working with the school design team and our community to develop a conceptual design for the new high school. It's been quite a process, but we want to make sure the new school reflects the input and needs of our staff, students, and community. We've been discussing everything from classroom size to the placement of tennis courts. Program-area work groups focused on specific needs for Career & Technical programs, Physical Education & Athletics, Fine & Performing Arts, General & Science Classrooms, Library, Security, and more. We even had an Eco Forum to discuss "green" options for the school. The end result will be an 80-acre learning complex that will serve our students and community for years to come.

Oregon Trail Supports Local Contractors

The Oregon Trail School District is dedicated to supporting local contractors and vendors whenever possible.

All County Surveyors

All County was selected to provide land survey services for the 80-acre Bell St. property. Last spring, Sandy High students assisted All County with surveying nearly 2000 trees.

Parker Fire Protection Services

Boring-based Parker Fire provided fire hydrant fire flow testing for the new high school design, and will install a new fire department connection at Firwood Elementary School. Bob Parker is a Sandy High graduate.

Konell Construction

Sandy-based excavation contractor Konell Construction is working with Geotechnical Consultant Geocon Northwest to provide geotechnical services for the new high school project. Konell has provided excavation equipment and services for exploratory trenches.

Firwood Design Group

Firwood Design Group of Sandy, and Winzler & Kelly Consulting Engineers, are partnering on the civil design projects for the new high school. Projects include site development, traffic flow, habitat and natural resources preservation, energy conservation, and more.

Sandy High graduate Jeff Konell, of Sandy-based Konell Construction, digs trenches on the Bell Street property.

Six schools were re-roofed or had roof repairs this summer: Boring Middle (shown), Naas, Kelso, Sandy Grade, Cedar Ridge, and the current Sandy High facility.

Sandy High students Thomas Collier and Kevin Maples spent their summer interning at DOWA Architects in Portland, building models of the new high school.
